The Power Unit with a HIGH "IQ"
Automatically adjusts hydraulic circuit flow to instantly
meet changing needs of your marine equipment!

Enables any hydraulic circuit to operate with 100% efficiency when running heavy-duty marine machinery. Simply set maximum GPM required with easy hand wheel control. The outstanding pressure-compensation pump is the "brain" which automatically re-computes flow as requirements change. It varies GPM down as near to "0" as possible while maintaining maximum 3000 PSI. Only the precise amount of oil needed is delivered. Puts an end to energy overloads and energy waste! The axial piston pump is mounted inside a heavy steel 30 gal. reservoir. Entire pump assembly readily lifts out for easy servicing. Unit comes with 7.5 HP Electric motor. Also includes suction filter, pressure gauge, and oil level sight gauge. Standard 1/2" NPT ports. Compact size 20"x20"x45"H. Wt. 170 lbs. *fob Chicago*
